

Grocery Bargains

Stocktaking reveals that we are long on some lines of goods.

For one week beginning Saturday December 12, we will offer the following items for cash.

Blue-Ribbon baking powder 16 oz	25c
Smiths Plum jam 4's	55c
Biscuits assorted per pound	25c
Soda Biscuits N. W. family	25c
Shredded Wheat 2 for	25c
Raspberry Jam, pure	85c
Palm Olive soap 4 for	30c
Seedless Raisins 5's	70c
Mixed Candy 5 lbs.	85c
Pumpkin 2's, can 2 for	35c
2 1/2 lbs tea	1.75
Carnation Mush per tube	50c
Five Rose oats per tube	25c
Corn Flakes 2 for	25c
Vinegar White and malt 32 oz	50c
Coffee, Special, per lb.	50c
Brooms 5 string	75c
Chipso large per package	25c
Pine Apple, sliced 2's per can	30c
Matches per package of 3	35c

in

"THE THIEF OF BAGDAD"

Fri.-Sat. December 25 and 26

M. D. of Golden Centre

The 7th meeting of Council of M. D. of Golden Centre No. 273, was held at N.E. 13 30 5 W. 4th., on Wednesday Dec. 2 1925. Members all present. Minutes read and confirmed. Correspondence read and disposed of.

Financial Statement to date was read and accepted.

Following accounts were paid: A. B. Hughes, stamps, 25.00; Royal Bank, excise stamps, 10.00; Reliance Hardware Co., axle grease, 60; Western Municipal News, 1000 tax receipts, 18.05; G. A. Walcott, expense of our share of crop on S.W. 24 20 0, 180.00; fee and mileage meetings, R. Gates, 18.00; Bruce Morris, 18.00; P. C. Hoard, 21.00; Ed. Stewart, 25.80; Frank Barker, 15.00; H. W. Hornett, 20.00; fee and mileage, road inspection, Bruce Morris, 14.00; R. W. Hornett, 20.50; taxes on land, 80.00; office expense, 20.00; telephone tolls, 5.10; express on supplies, 75; Ralph Greene, salary, Oct. Nov. and Dec., 375.00, bailiff fees, 117.00; T. J. Costigan, soil culture fee, 2.50; expense to convention, Frank Barker, 40.00; Ed. Stewart, 40.00.

Time for taking title under the Tax Recovery Act was extended to March 6 1926.

Secretary was instructed to strike off taxes on cancelled land.

Council adjourned until Wednesday January 6 1926. Ralph Greene, Sec. Treas.

1926 Village Council Elected by Acclamation

Dr. H. C. Swartzlander, George A. Morrison and James Lees will be the 1926 village council. The above ratepayers were elected to office by acclamation at the nomination meeting held last Monday.

WEDDING

Herron—Sheppard

The marriage of Myrtle Irma, daughter of Mr. and Mrs. Sheppard of New Brigidon, and Mr. Robert Melvin Herron of Esther, Alta., was quietly solemnized at the United Church parsonage, Oyen, on Monday, December 7, Rev. C. R. Corcoran, officiating.

Mr. and Mrs. Herron left on Tuesday for the British Columbia coast where they will spend their honeymoon. On their return they will reside on the groom's farm near Esther.

WEDDING

Young—Heady

The marriage of Dorothy Marion, youngest daughter of Mr. and Mrs. W. R. Hendry of Bigdison, to Mr. Robert Bruce Young was solemnized at the home of the bride's parents on Tuesday, December 8, at 2:30 p.m., in the presence of a large number of friends, Rev. C. R. Corcoran, officiating.

The bride was attended by her sister Miss Jocelyn Hendry and the groom by the bride's brother Mr. Ritchie Hendry.

Following the ceremony the party sat at a wedding breakfast. Mr. and Mrs. Young left for Calgary to spend a honeymoon.

The Place with the Big Stock Reasonably Priced

Christmas just about two weeks away. Don't wait for the Annual last minute rush. You know you must do some Christmas shopping. Some friends you just must remember. Come right down here. Morning shopping is the best, and get in on the first selection early.

A Deposit will hold any article in the store till Christmas.

Ladies Sweaters, Pullovers and sweater coats, Fancy and plain colors, all sizes make suitable gifts \$3.50 to 7.50.

Ladies Silk Scarfs also wool scarfs 1.25 to 4.50.

Fancy Stamped Linen pieces and towels selling Xmas special from 40c to 2.00.

Long cuff or short wool gloves all new shades and styles Xmas special 90c to 2.75.

All the new shades in silk and Wool Hosiery for the correct dresser selling from 1.40 to 1.50.

Penmans Silk hose in all the new shades is exceptionally good value and an ideal gift 1.50 per pair.

Ladies shoes, Patent Leather, new shade of Tan also Black, new styles for street or evening wear selling from 4.50 to 8.50.

Our supply of Christmas Groceries is quite complete. Raisins, Currants, Peels, bulk and package Dates, Dried Cherries, Red Sugar, Caraway and Silvered Cake Candy, ground Almonds, Almond Paste, Candy and Christmas Nuts in abundance.

Leave your order for Christmas trees.

KING in Radio

The KING IN RADIO line is complete.

A 5-tube style of receiver to suit the need and purse of every radio enthusiast. Two circuits—Neutrodyne and Tuned Radio Frequency—the two endorsed by eminent radio authorities as the leaders in design and proven by popular demand to give unexcelled results in service.

The tone is full and clear. The cabinets are of beautiful workmanship and design, in either walnut or mahogany. KING receivers are reliable, accurate, will give lasting service and are easy to operate. They are backed by the King organization which is noted for its precision products. King has never made anything which was "second rate".

Priced from \$85 to \$250

See our demonstrators and be convinced of KING IN RADIO superiority.

Protecting The Farmers' Savings

Be Careful of the Wiles of the Slick Company Promoter

A matter that is causing grave concern to Canada's responsible financial and business men is the increasing of the farmers' hard-earned savings. Canadian farmers have had good crops this year and are receiving fairly good prices therefor. By far the greater portion of them have a little put away in the bank for a rainy day. This is all to the good.

Unfortunately, there are certain parasites that find easy pickings among Canadian farmers when times are good. These are the promoters of doubtful companies and salesmen of securities or articles that are not worth the price paid therefor. All kinds of companies are floated and stock sold at from a few cents a share up. Much of this is unloaded upon the farmer. He receives a stock certificate, and in many cases, the majority of cases, this is all he receives. Farmers should beware of these people. Any proposition that is worth the price today does not have any difficulty in placing its securities. Legitimate bond houses receive a wealth of good securities. This is evidenced by the keen competition for government and municipal loans.

When the Canadian farmer is approached by those who would have him part with his savings, before signing any paper he should consult his bank manager. The latter is in a position to safely advise, and his advice should be taken. The responsible bond salesman will be glad to be told that the farmer is the promoter's endorsement, while the fake promoter will endeavor to show that the banker is prejudiced against his scheme. There will be little avail.

What has this to do with the development of Canada's natural resources? According to the natural resource intelligence service of the department of the interior the cultivation of the land is Canada's greatest resource, and a happy and contented farmer is the groundwork of our prosperity. The farmer who is devoid of his earnings cannot be happy.

An Indian Discovery

Given Credit For Finding Sugar Possibilities of Maple Tree

To the Indians, it is said, belongs the credit of discovering the sugar possibilities of the maple tree and taught the white man. The Indians made both sirup and cake sugar of the most delicious kind and it was an article of barter among them. They also made two other kinds of sugar. The root of the mesquit, a kind of agave, was roasted and then eaten. This had the appearance and even the taste of roasted but rather tough sugar beet. The native cane growing in the western states was used for preparing brownish sugar of excellent flavor. It was sold in cakes and considered by the Indians a great delicacy, since it was made by a laborious process and the cane was rather scarce and difficult to procure. But the maple sugar was the most savory and important of the Indian sugars.

Likes Quilt Situation

Man in France Lives in Cemetery and Refuses to Move

M. Charles Moyeux has found the quiet consequences of living in a house in the centre of a cemetery in Belgium too pleasant to allow himself to be persuaded to move, in spite of the encroachments of the dead. The mayor of the town has been forced to issue an explanation order to force him to give way. The cemetery is a new one, and when it was built M. Moyeux was allowed to rent his home in the centre of the new burial grounds until the space should be needed. Now it is needed and M. Moyeux won't move.

Monks Invented Alarm Clock

Alarm clocks which today we associate with early morning yawns, were invented by the monks as a means of awakening themselves in preparation for their devotions which began in the very early morning and some cases were continuous, one monk relieving another before the stars of their chapel, at all hours of the day and night.

Robin Rules Garden

A robin which has its home in a tree in the garden of a suburban home at Liverpool, has been successful in keeping out all other robins. The bird has been called Jerry by the garden owners. Jerry tolerates all other birds, but will not let another robin make a home in the garden.

Proud Of Being Talkative

Idle Talk Does Not Burden Listeners Says Woman Writer

A woman writer has come to the defence of chattering women. Instead of deprecating that women are talkative she admits it and as a woman writer rather proud of it. "There is much to be said for chattering," she says. "It is essential to the species and does not put a heavy burden on the listener. Neither, apparently does it subject the talker to any great strain. Probably the worst that can be said against chattering, when it is not deemed to be malicious gossip, is that it means a waste of time. On the other hand it helps to fill in time that might otherwise drag painfully. And, no doubt, it is helpful to the nerves."

But while it is the custom to speak of women as the talkative sex, it must not be assumed that men do not do their share of chattering. They would probably find it as difficult to fill in their spare time without chattering as would the women. The subject which men may be different from the subject favored by the woman; but the men do indulge in a lot of idle talk. Perhaps they can't because they are not so much interested in an exceedingly difficult matter to carry on a really good conversation; and it is probably no easier for men than for women. It is the custom to say that good conversation is one of the lost arts. Probably there is some truth in the saying. One explanation may be that everybody reads the newspapers these days; and every time that anyone has something good to say he feels restrained by the thought that his hearer may have seen it already in the papers. And people are too busy with other things to think of any subject to say. There was a time when a man could make a reputation for himself as a conversationalist by learning the jokes in an almanac, but that time is gone. Even the almanacs get their jokes from the newspapers—Stratford Beacon-Herald.

Hard To Trace Relationship
How Man Figured Out He Must Be His Own Grandfather
But a man became his own grandfather to him in the Addlestone, England, pure magnificence. "I married a widow who had a grown up daughter," he says. "My father visited our house every other year, but he was my step-grandfather, and married her. "My father thus became my son-in-law, and my grandfather, my mother, because she was my father's wife. Sometime afterwards my wife had a son—he was my father's brother-in-law, and my uncle, for he was brother of my stepmother. "My father's wife—namely, my step-grandmother—also had a son; he was, of course, my brother, at the same time my grandfather, for he was the son of my grandfather. My wife was my grandmother, because she was my mother's mother. "I was my wife's husband and grandfather at the same time, and as the husband of my grandfather, he was my grandfather. I was my own grandfather."

I was my own grandfather."

"I was my wife's husband and grandfather at the same time, and as the husband of my grandfather, he was my grandfather. I was my own grandfather."

Proposed Badge For Warship Is Rejected

Cast of Lloyd George Censured by British Admiralty

The admiralty has censured the cast of the Lloyd George "badge" selected for the destroyer Vivacious to typify "vivacity," the quality from which it takes its name. Every British warship has its characteristic badge and the selection of those devices has given the admiralty trouble more than once in a while.

The vessel named after the classical hero, cup bearer to the gods, had as a badge a pictorial representation of a well-favored damsel drawing beer from a machine. This has now fallen into disrepute; the craft called Tormentor carries the descriptive badge of a den. The Vivacious, however, will not carry Lloyd George's likeness as its insignia. It will carry a squirrel instead.

Starts Around World in Canoe

Rudolph Philip Hochle, a Bangor, Me., seaman, sailed down New York harbor, Nov. 23, in a 50-foot canoe propelled by an outboard motor, in which he hopes to travel a 50,000-mile course around the world in three years.

His boat, the Mariposa, carries 200 pounds of equipment and last night left camp to begin its journey.

Big Shipment Of Livestock

One of the largest individual shipments of livestock ever made in Western Canada was recently forwarded by Hamilton, Ont., of High River, from the Brooks ranch to the Winnipeg stockyards. There were 27 carloads and 800 head of cattle. They averaged 1,245 pounds and the total load weighed 1,235,000 pounds.

Land Barrier Once Joined Two Continents

Old and New World Connected by Land in Remote Period

Fossils collected in many parts of Europe during the last four months by a party of scientists sent abroad by Princeton University and the Smithsonian Institution have established that a land barrier or a narrow continent extended continuously from the North American continent to Europe during the paleocene age, according to Prof. Richard M. Field, of the department of geology of Princeton, who was a member of the expedition. The paleocene age closed about 55,000,000 years ago.

The existence of the narrow strip of land connecting Europe and America is considered established by the fact that the southern marine fossils are wholly dissimilar to those on the south of the barrier. Marine fossils in paleocene rocks in the northern part of Newfoundland were found to be identical with fossils of the same age in Wales, Scotland, Norway, Sweden and Denmark. This meant that these rocks on both sides of the Atlantic were once parts of the same ocean basin, according to geologists as the North American continent.

Further south in North America, and also in Central Europe and in Europe, numerous sets of fossils were found. These southern fossils were identical on both sides of the Atlantic, but wholly different from the northern fossils. This could only mean, according to Prof. Field, that the marine life of the North and South Atlantic Oceans never mixed, and that therefore they were wholly separated by a land barrier.

The fossils are those of invertebrate creatures only. They did not include plants. This period was many millions of years before the mammals and before the existence of any vertebrate life. We obtained many skeletons of siberian fishes from a quarry near Oslo, but those are of a later date than the paleocene.

Making A Job Is Possible

Resourceful People Can Usually Create Some Kind of Work

Quite a number of unemployed workers, despairing of finding relief in the ordinary way, have said to themselves, "If I can't find work, I will make one." They have then gone out and done so, not in decidedly unconventional directions. A skilled workman, for instance, whose firm was compelled to shut down owing to lack of work, looked for jobs that weren't to be had. He possessed a number of tools, and getting a bit of wood here and a pair of pliers elsewhere, he made a very serviceable barrow. With this he hawked round the neighborhood the vegetables grown by another workman, and thereby created "a job" for himself. The resourceful folk are now doing well enough to buy produce from other growers.

Germans Fond Of Radio

Calculating that there are three listeners on each radio set, it is estimated that out of a population of about 2,000,000 there is a radio audience of 1,250,430 in Greater Berlin, each anxious to hear the broadcasting of the government's station.

As Usual

Hubby: "I have finished my memory course and they have given me a diploma." Wife: "Where's it in?" Hubby: "Good gracious, I must have forgotten to take it."

The Aristocrat

"But are you sure he's highly bred?" "Highly bred? Why, mum, he got the best horse of this little dog yer husband will 'ave for yer seat spats on 'a tall 'at."

Out for a \$100,000,000 Apple Crop.

Canadian apple growers have availed themselves of the advantages to be derived from crop exploitation and are taking to heart the lesson from the National Apple Week campaign just concluded. The Canadian apple crop this year is valued at about \$25,000,000. This is but a fraction of its potential value under the most favorable conditions, but it makes it imperative that growers should be made aware of the advantages to be derived from crop exploitation. California orange growers conclusively proved to the world that the advantages to be derived from such a system. Canadians can do the same with their apples. The above photograph shows thousands of barrels of apples, grown along Canadian Pacific Railway lines and unloaded at Halifax, N.S. Inasmuch as the apples are being loaded onto a Canadian Pacific steamer bound for Great Britain.

Progress Of The English Language

Estimated That This Language Is Now Used By 170,000,000 People

Every now and again incidents are reported that serve to impress upon the constant the progress made by the English language throughout the world. Quietly and without observation it makes its way so quietly that only occasionally does the movement draw comment even in the nations that can see no reason why their tongue should not become the universal medium of vocal communication. Among the latest reports of the growing power of English is one from Vienna, where last year the teaching of English by radio was begun with a measure of degree of success. Possibly as the result of this experiment the Austrian minister of education some little time ago issued a decree recommending English as a compulsory modern subject of study in the higher school grades and to that extent out of French and Italian.

The English vocabulary is an enormous one; it contains some half-million words, and is one of the most heterogeneous that ever existed. In this respect it is to be found very different from the languages of the past, and is one of the most heterogeneous that ever existed. In this respect it is to be found very different from the languages of the past, and is one of the most heterogeneous that ever existed.

The causes of the mixed character of the language are to be found in the numerous races to be found in the empire of Britain, its extensive commerce, and its growth as a world power; while its suitability as a universal tongue arises largely from the geographical scattering of the domains of the far-flung empire, one result of which is that the English tongue is already known in almost every corner of the globe. Apart from the geographical diffusion of the language, a conservative estimate places the number of those speaking it at approximately 170,000,000, leaving all other tongues far behind.

Great Relief For Motorists

Powerful Magnet Will Pick Up Nails From Road

With a powerful magnet suspended from the rear of a five-ton automobile truck, more than 400 pounds of nails, tacks, bolts and pieces of scrap iron were removed from a section of the road near the Yellowknife, N.W.T., where the road is a constant source of trouble to motorists. The magnet was driven back and forth, the magnet, four inches above the surface of the road-way and supplied with current from seventy-two cells of the locomotive storage type, lifting jagged bits of metal from the loose stones covering with glass. Many of them were so small that persons walking slowly along the road could not see them.

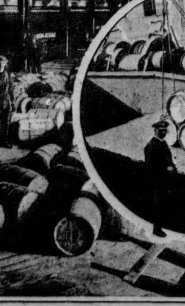

As Usual

Winnipeg Officer Had Responsible Task

Located Body of 'Unknown Soldier' For Burial In London

Five years ago on November 11, there was laid in Westminster Abbey, London, in the presence of a vast multitude, the body of the empire's "unknown soldier." It was now disclosed that the responsible task of locating the body was entrusted to a Winnipeg officer. He is Captain J. J. Walsh, of the Canadian Light Infantry, formerly on the staff of the imperial war graves commission.

It is a closely guarded secret who conceived the idea of burying an "unknown soldier" in Westminster Abbey, but the order is known to have come from an officer high on the general staff.

Captain Walsh's account of the search is related as follows: "After receiving instruction, I took 12 men with me and went out to one of the great battlefields. I cannot even say which battlefield was visited. We were able to tell from the color of the ground where bodies might be found. Several were discovered—until we came across one that was absolutely without identification. There was nothing on the clothing or anything at all to show whose body it might be. "All I can say is that it had on a private's uniform, but even this is not significant, for many officers wear private's uniforms when going into action. The body was brought into camp, stripped of its clothing, wrapped in a canvas shroud, placed in a coffin and forwarded to London. It is all that can be known or ever will be known."

Rocky Mountain Spotted Fever

Vaccine Perfected Which Is Said To Give Protection

Science has avenged the death of three of its heroes, who died searching for a cure for Rocky Mountain spotted fever, one of the most deadly infections.

The United States public health service announced that a vaccine has been perfected which gives protection against this scourge. Experiments on animals and finally on a group of men indicated its effectiveness. Experiments extending over many years, three scientists, Assistant Surgeon Mermet, of the United States public health service, and two laboratory assistants, died of the fever.

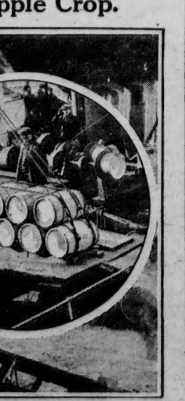

A Unique Operation

Professor Opell, of Leningrad, announced before a conference of physicians and surgeons that he had successfully transplanted a bone from a dead body to a woman patient suffering from tuberculosis of the knee joint which prevented her from walking. After the operation the woman, in a short time, was able to walk freely.

The Aristocrat

"But are you sure he's highly bred?" "Highly bred? Why, mum, he got the best horse of this little dog yer husband will 'ave for yer seat spats on 'a tall 'at."

Good Health And Humidity

Prepared By The Canadian Medical Association

Winter humidity, however, always brings in Canada an outbreak of respiratory troubles, and of the so-called "common cold." It is not so much cold air, however, from which we suffer, as bad air, superheated air, and above all, perhaps, too dry air. It has been observed times without number that in school classrooms when there is no provision or not sufficient provision for humidifying the result is "a very bad effect on the comfort, ability for work and the behavior of the pupils."

"Too dry air is certain to irritate both throat and nose. Very many of our modern dwelling houses or city apartments carry no higher than 20 to 30 per cent, moisture in the air. It is just about the humidity of the Sahara, but braving the desert air is regarded as a real adventure, and when a desert trip is undertaken every kind of care is taken to protect the nose and throat against the aridity."

It is a pity we Canadians who too often allow ourselves to be situated in over-heated buildings in the cold weather, would not realize the risks we run in doing so.

No-one escapes the ill effects of an excessive heating and ventilating. Human indoor dwellers who have a dry, hot body, must, however, during the winter season, should remember that the thermometer does not tell the whole story. Science today links temperature, humidity, and air current, and velocity of air current. Dust and aridity are both menaces to health. Airborne germs do not exist, but dust-borne germs do exist. Clean, warm, humid air is safe and healthy. Over-heated, dry, dust laden air is always dangerous.

The World's First Lantern

Alfred the Great Created the Idea in 1000 A.D.

Alfred the Great, the King who burned the cakes and created the British navy, accidentally invented the lantern. In his day and generation, there were no candles, no oil lamps, no gas, no electricity. The only light came from the fire. Alfred the Great, however, was a man of vision. He saw the need for a better way of lighting. He created the world's first lantern. It was a simple device, but it was a great improvement on the candles and oil lamps of the time. It was a lantern that could be used in a variety of ways. It could be used to light a room, or it could be used to light a path. It was a lantern that was easy to use, and it was a lantern that was safe. It was a lantern that was a great improvement on the candles and oil lamps of the time. It was a lantern that was a great improvement on the candles and oil lamps of the time.

A Useful Sea Bird

Almost Every Part of Albatross Is Used For Some Purpose

The albatross is the mightiest of the deep-sea birds, having a wingspan of 10 ft. It is commonly said that, when angling for and captured by enterprising apprentices on windjammers, the breast of the albatross becomes a muf, his feet are turned into tobacco pipes, his beak into the handle of a walking stick, and his wing bones are made into pipe stems. As Australian paper asserts that some enterprising London firm is regularly importing albatross wings bones for this use. The wing bones of the frigate bird are also used for the same purpose or for cigarette holders.

Not Worth The Price

A small boy strolled into the drug store and said: "Give me a nickel's worth of anafiline." The druggist wrapped it up and gave it to the boy. "Charge it," said the boy. "What name shall I put on the receipt?" "Humfink," was the answer. "Take it for nothing," said the druggist. "I wouldn't wish anafiline and Humfink for a nickel."

Birdman Again Breaks Record

The motorist, French pilot Jean Bessourot, with a super-Goliath plane carrying four motors developing 2,000 horsepower, broke the world's altitude and duration records by heavier than air machines carrying a useful cargo of 8,518.50 pounds. Bessourot remained in the air 5 hours and 15 minutes and reached an altitude of 15,000 feet.

B.C. Coal Production

Coal production in British Columbia in the nine months ended September 30, showed an increase of 237,171 tons over the corresponding output in the corresponding period in 1924. In the nine months of the present year the aggregate output was 1,779,918 tons, as compared with 1,542,747 tons in the same period in 1924.

Our National Geography Is The Largest Single Factor Affecting Canadian Development

Unfortunately, to most readers the term "geography" has but an academic meaning. As a matter of fact, however, our national geography is the largest single factor affecting Canadian development. It is about as little academic as a mortgage, and a bigger and more important factor than the public debt. It is a permanent, fundamental factor touching our national development at every turn. To study and make known the physical geography of the Canadian people own and have to develop is the general object of the natural resources intelligence service of the department of the interior.

Great credit is due the geologists of the department of the interior for the work it has pursued in studying the physical geography of the Dominion. The scientific study of the physical geography of the Dominion is a product of that work. It shows Canada in the light of its basic physical divisions—the only light in which one can intelligently study our economic geography or make any

Machine For Cleaning Wheat Is Perfected

Is Attached to Separator and Removes Weeds While Threshing

The weed-cleaning machine, which has been perfected by Alberta department of agriculture, is attached to the top of the grain separator, and cleans the grain of weeds and small grain, before it goes to the bin or wagon.

The device weighs about 600 pounds, and is driven by a belt from the beater shaft. Only from 1 to 1½ horsepower motor is necessary to drive the machine, and it has a capacity sufficient to permit it to handle the run of grain from any make of separator now in operation in the west. The excessive amount of vibration which was an undesirable factor in the first model of the invention, has now been successfully overcome. It is expected that the provincial department will direct the perfecting of the machine next season on a basis that will make it easily possible for separator men to finance the invention is declared by grain men and farmers to be the greatest step forward yet taken in the control of weeds on farms and the reduction of loss in the market, of grain.

Manitoba Agriculturists Discussing Farming Problems

Rust Ravages and Methods of Control Was One Subject Discussed

As much uncertainty is possible, and at least a uniform method is required in deciding which crops are most suitable for different districts in Manitoba, said Dr. T. J. Harrison, of M.A.C., in addressing the Manitoba agriculturists assembled in convention, at the University of Manitoba, in a lecture, endorsed Prof. Harrison's suggestion, especially with regard to varieties of wheat. It certain varieties were better than others for different districts, all workers who had them on then should compare notes and know exactly what recommendations they were prepared to make in reply to inquiries. Otherwise advice might emanate from different stations which, while not conflicting, would at least be puzzling.

Dealing with "Some plant diseases and their control" Dr. D. L. Bailey, Dominion rust laboratory, remarked that the "tailor" disease of wheat, sometimes called "strip rust," had been identified in certain districts of Manitoba but did not promise to be serious and had not yet been studied in this country.

This year had been ideal for rust investigation and a good epidemic, had been the experimental standpoint, had been obtained and satisfactory records compiled.

Data on the exact amount of damage done by rust in the past year, obtained as the by-product of an experiment which showed that sulphur dust, applied to the growing plant, entirely eliminated rust. This fact, though interesting, lacked practical significance. Dr. Bailey remarked, but from adjacent places, it was found that the rust, which was the only factor affected by the sulphur treatment, had injured the control plots to the extent of 75 per cent. in yield and degraded the grain from No. 3 Northern to No. 5 wheat.

The speaker also announced that rust culture was better under way than it had ever been.

Treatment for smut was dealt with by Mr. Connor, who gave the results gained from his experiments this year. Dr. G. H. Hoby mentioned that, among other crop diseases recently found in the province were downy mildew of sunflowers, and stem canker of sweet clover, both pointing to be fairly easy to control.

A committee consisting of Dr. Bailey, Dr. C. H. Golden, and Mr. Connor, was appointed to be kept posted on the plant disease situation.

The question of the rank of seedling for the purpose of seed selection, a discussion since Frank Poulsen, of the Dominion seed laboratory, brought evidence previously submitted by Mr. Young to the Manitoba seed board, that these varieties germinated much faster than seed of other varieties. Prof. Welner also showed that they averaged fewer seeds per lb. The matter was dropped, however, as they therefore be seeded much more heavily than was not borne out by such scanty experimental data as was available and which was contradicted by S. J. Slusson and J. H. Ellis.

A slight increase seemed to be agreed upon by the members of the Dominion seed committee, and the Dominion seed committee, formed to draft concrete recommendations.

How The Telephone Enters Intimately Into Every Phase Of Both Urban and Rural Life

A Business Institution

Prince of Wales Ranch Operated as Profitable Business

Should the Prince of Wales Ranch be used to remove his right to the British throne, he could settle down and and a good living as a farmer on his ranch in Canada.

Prof. W. L. Carlyle, manager of the Prince's ranch at High River, Alta., is authority for this statement, made at Chicago, where he exhibited the Prince's Shorthorn bull, "King of the Furies," at the international livestock exposition.

"A man who thinks the Prince runs a 'dude ranch' is mistaken," said Prof. Carlyle. "The farm is an efficient business institution, designed to be operated at a profit. The overhead is kept at rock bottom."

The ranch, Prof. Carlyle said, has more than 500 head of livestock, including 200 pure-bred Shorthorns, 200 young bulls from the herd annually, at prices ranging from \$200 to \$1,500 a head, the manager said. "The sale of 100 rams a year from \$40 to \$150 each, brings additional revenue. The stock is sold to breeders in both the United States and Canada."

Regarding the possibility of the Prince returning to the farm next year, Prof. Carlyle declared the best of the British throne "gets more news and comment there than in any other place in the world."

Moreover, he is an enthusiastic rancher, fond of his stock and takes a deep interest in the operations.

"He is no greenhorn. He can ride a western pony as well as any cowboy, and rope a steer with the best of them."

The value of the Prince's investment is constantly growing. The ranch complex, 4,200 acres, the land and buildings and stock are worth in excess of \$200,000.

The most striking trait of Canadian life to new arrivals from Europe is the manner in which the Dominion, which they had considered as a very new and therefore raw and crude country, has brought into general, everyday usage the most modern and up-to-date conveniences and amenities which invention has given to the world.

The resident of Canada, for instance, does not appreciate, like the country's prominent position in regard to the use of the telephone into the fields, Europe, where the inconvenience and irritating loss of time arising from the lack of this means of communication drives it straggling home. The approach of the centennial of the invention of the telephone makes it an appropriate time to bring before the Canadian public the achievement in this connection.

In 1921 the Canadian census showed a population of 8,735,183, and in the end of 1921 there were over 1,009,202 telephones in operation throughout the Dominion. This works out at eleven telephones per 100 of population, or, eleven per cent, and in respect to this development, Canada takes second place only to the United States, where the figure is 15.7 per cent. Among the countries of the world, the British Empire, Canada, and the United States are the only ones where the figure is higher in Canada than in any other country of the world. The gross annual earnings per telephone for the fiscal year 1921 in the Netherlands were \$4.11; in Great Britain, \$3.18; in the United States, \$1.83; and in Canada, \$2.14.

This development is by no means confined to the matter, more development and established sections of the country, but, on the contrary, is more pronounced in the newer western territory. The city of Calgary in Alberta has but the entire world in regard to the number of telephones per capita, a population, with, at the present, one telephone for every four and a fraction residents, and that for the province of Saskatchewan there are two rural telephone subscribers to every urban subscriber, a situation which is equaled by only four states of the Union.

This is a very gratifying state of affairs, and it is a measure of the progress in all directions along the most modern lines. The telephone has come to enter most intimately into the life of the Canadian people, and more especially the agricultural. The line of telephone poles follows roads, and the farmer given adequate touch with that world from which he is apart yet with which he transacts business. The extension of the phone throughout the remote farming settlements of Canada is a situation of which the poorly supplied European can form no conception.

MAP OF CANADA PHYSIOGRAPHIC DIVISIONS

DEPARTMENT OF INTERIOR MINES AND TECHNICAL SURVEY

Scale: 1 inch = 100 miles

Finch Cattle At Fort William

Feeding Lot To Be Operated At Once

Announcement that the Livestock Producers Company of Canada has gone to operate a feeding lot at Fort William, where export cattle could be finished in the open in the same way as was being done by the company at Calgary and Edmonton, was made at Winnipeg by V. J. McLaughlin, who is the agent for the company throughout the west.

"This year," said Mr. McLaughlin, "we intend to finish 800 export cattle at Fort William, the feed used being secured from the local market. We have secured an excellent site which ought to be an old Grand Trunk tract with an area of 80,000 square feet which Colonel St. John is buying into shape."

Elevator Screenings For Feed

Offered For Sale By Elevator Companies At Lakes Head

Screenings cleaned from the grain crops of Western Canada are now offered for sale by the elevator companies at Lakes Head.

There are offered as standard screenings, consisting chiefly of broken wheat and wheat middlings, varying proportions as well as small quantities of domestic oats, barley, etc., invariably present. At screenings this year crop of screenings from 25 to 40 pounds per bushel. These re-cleaned screenings are obtained from the original elevator companies from which the chaff and fine weed seeds have been removed. Referring to this class of feeds, Mr. McLaughlin said that the Dominion seed committee, formed to draft concrete recommendations, pointed out that they may be purchased under the security of inspection certificate, if so ordered.

French Meteorologist Predicts Cold Winter

Professor Believes It Will Set Record

For Canada

It is going to be a cold winter in Canada, as well as all round the forty first parallel of latitude, as cold as the winter of 1840 in England, when the Thames froze.

This prediction is made by M. Gabriel, France's most distinguished meteorologist and professor in the University of Caen.

All of Canada and the whole of the western part of the United States will have a bitterly cold winter, which ought to set in about the middle of December or early in January," he said.

M. Gabriel's prediction is based on the supposed existence of astronomical cycles.

Person

The physical qualities of the Canadian people in the Dominion, which gives the value of the Dominion as a national property—as our means of national support and growth. And the intelligent development of the country requires that everything else a clear, broad grasp of its geography, of its physical nature, and layout.

Canadian development has been, and will continue to be, greatly advanced by means of different forms of development: public action, railway building, immigration, industrial research, technical education, the collection of adequate data—these are complex other lines of public activity enter into the work of widening, strengthening, guiding or illuminating the course of national growth. But underlying all such constructive enterprise is the physical geography of the Dominion.

This is, of course, one necessary phase of geographic work. But it does not exhaust the important work of portraying the economic geography of Canada—the fundamental physical features which control the productive capacity of the property.

The narrow lines which the study of economic geography has followed in Canada have succeeded in giving us, most everyone a fair superficial idea of the Dominion. Probably nine out of ten Canadians out of ten could sketch a fairly good rough map showing the political divisions of the country by provinces and territories. Few Canadians, however, would ever recognize a map showing the great geographic regions which not only shape the whole character of the Dominion's economic development, but actually create our transportation, traffic and most of our other major political questions.

Irish Free State Exports Many Eggs

Second in Importance To Denmark In This Industry

As exporters of eggs the people of the Irish Free State rank only second in importance to Denmark and these are probably sold as English "new laid" and fetch as high price as the best that come to the market. Danish eggs, of which Britain imported 2,577,000 worth last year, also have a high reputation. Eggs in the Irish Free State rank high from all parts of the world, including Lithuania, Poland, France, Italy, Czech-Croat-Slovenia, Spain, Egypt, China, U. S. Canada and South America.

Women and Abilities

Although a woman's skill at running and swimming may be as well developed as a man's, she can swim but 40 per cent, as fast and run but 40 per cent, as fast as a man, according to estimates. The chief reason accepted for this condition is that a woman cannot exert the same power as a man.

The wood of the red Norway pine is heavier, harder and more resinous than white pine, but it is used for the same purpose.

Some people are so mean that they even make their attempts at politeness disagreeable.

About the time a man's first baby gets old enough to say things other than "mama" to him.

Trying To Save Antelope

Game Guardians and Police Patrol Areas in Saskatchewan

In an effort to save antelope in Saskatchewan from extinction, game guardians and provincial policemen are patrolling the country south of the South Saskatchewan River and in the Maple Creek district where the few remaining prairie make their home.

F. Bradshaw, provincial game guardian, states that the rapid decrease in the number of antelope is alarming, and he is urging the antelope for the last of killing. He has circulated posters, entitled "A Square Deal for the Antelope" among station agents and game guardians.

Urges Agricultural Education

An agricultural college is to be established in a central position in New Zealand, involving an outlay of £200,000 for land, buildings and equipment, and an annual outlay of many thousands for staff. In the meanwhile the board of education is planning a system of farm training colleges for elementary agricultural education, emphasizing that New Zealand must make full use of its natural resources and develop its people effectively in the world's markets.

Mrs. Prof. "Has the professor had his breakfast?"

Maid: "I don't know."

Mrs. Prof. "Then ask him."

Maid: "He says he doesn't know either."

In British Columbia there is an abundant supply of red cedar, sometimes called "redwood," as it frequently reaches 120 feet in height and 10 feet in diameter.

Low Rate On Perishable Food

Winter Express Rate Now Only Ten Per Cent. Higher Than Summer Rate

British Columbia fruits and vegetables will move to the interior provinces this winter under unusually low express rates, reduction in the rates having been announced to become effective December 1.

The special summer rates of fruit and vegetables terminated November 29, but instead of bringing into force the second class rates customarily applying from December 1 to April 30, the railway express companies are introducing a tariff which is only ten per cent. above the special summer rates.

Market For Produce

Canada Can Greatly Increase Her Trade With Britain

Trade between Canada and the United Kingdom, at any rate as far as produce trade is concerned, can be increased and the profit can be made ten per cent. higher within the next twelve months if the Canadian merchants will ship on consignment, Col. Hilliard Lay, representative of a group of British produce merchants, stated in the course of an interview at Montreal.

Col. Lay emphasized that there must be some sort of Dominion supervision or control of Canadian produce in order to obtain standardized quality of goods, such as the Danish merchants had succeeded in producing.

Wheat Exports

More Than Doubled In First Three Months of Present Crop Year

Exports of Canadian wheat have more than doubled in the first three months of the present crop year, as compared with last year. The total exports for the three months in question, which ended October 31, to all countries, was 1,037,000 bushels, as compared with 227,400 bushels for the corresponding period of last year, while the value of the exports rose from \$46,236,000 to \$108,374,000. The largest proportionate rise was in the shipments to the United States for consumption in the country, which increased more than five times.

Manitoba Fish Industry

About Half A Million Pounds Sent Weekly to American Points

An indication of the importance of the fish industry is given in the statement to the effect that close to 500,000 pounds of Manitoba whitefish are being shipped weekly to New York and Boston. The fish are caught principally in Lakes Winnipeg and Manitoba, and since being introduced to the markets of New York and Boston, some years ago, the demand has continued to increase.

What He Really Wanted

She: "I've sent back your letters, your presents and your ring. Is there anything else I can do?"

He: "You might return my love."

There are eight species of pine in Canada, but only five are of commercial importance.

LADEE, SON OF KAZAN

James Oliver Curwood

A LOVE EPIC OF THE FAR NORTH

Copyright, 1917, by Doubleday, Page & Co.

"LADEE, SON OF KAZAN," a Vitaphon Picture, With Wolf, the War Dog. An Adaptation of This Story.

SYNOPSIS

Three, the wolf-dog, had left the cabin of Pierr, the trapper, to join the wolf pack. But the wolves would not have him. He was only half-wolf, and back to the cabin he went, to be the guardian and pet of Pierr, the trapper's daughter, hereafter. One day Pierr received word from McTaggart, the hunter, asking him to go to Lac Laine and help in the animal store. A few days later, while McTaggart was away, it was a strange request and caused Pierr to wonder.

CHAPTER XIX—Continued

"And—Pierr, to bring her," Pierr's eyes were on Pierr's head. "From the store that the wolf had left in, and Pierr, about that. But she could not have a chance for a day as she was to go."

Pierr nodded.

"Pierr, Pierr, Pierr," Pierr said, "When Pierr was about to leave the next morning, Pierr said:

"Tell McTaggart that I will have for Lac Laine the day after tomorrow."

After McTaggart had gone, he said to Pierr:

"And you shall remain here, no other. I will not take you to Lac Laine. I have had a dream that McTaggart will go on a journey, but that he has lost, and that he will be dead when I arrive at the post. And yet, if it should happen that you came to go."

Neposee straightened suddenly, like a roed that had been caught by the wind.

"Non!" she cried, so fiercely that Pierr jumped, and rubbed his hands.

So it happened that on the second day after the fox-hunter's visit, Pierr left for Lac Laine, with Neposee in the door waving him good-bye until he was out of sight.

On the morning of this same day, Pierr McTaggart from his bed while it was still dark. The time had come. He had hesitated at first, in his hesitation he had found a better way. There could be no escape for Neposee.

He ate his breakfast before dawn, and was on the trail before it was yet light. Purposely he struck out over the snow in coming up from the north, and most Pierr would not strike his sleds tracks. For he had made up his mind now that Pierr must not go, and that he must never have a suspicion, even though it cost him many more miles to travel that he would not reach the Gray Loon until the second day. It was better to be

late than to be caught by the wind.

door when the Pierr from Lac Laine entered the cabin, and for a few seconds she did not turn. Her first thought was of Pierr—for some reason he had returned. But even as she thought came to her, she heard in Pierr's throat a snarl that brought her suddenly to her feet, facing the door.

McTaggart had not entered unprepared. He had left his pack, his gun, and his rifle coat outside. He was standing with back against the door, and at Neposee—his her wonderful dress and flowing hair—she was staring as if amazed for a space at what he saw. Pale, or accident, was playing against the Willow now.

It was not a long interval to wait for her eyes met in that terrible silence—terrible to the girl. Words were unnecessary. At last she understood—understood what her peril had been that day at the edge of the chasm and in the forest, when fearfully she had played with the menace that was confronting her now.

A breath that was like a sob broke from her lips.

"McTaggart," she tried to say. But it was only a gasp—an effort. She seemed choking.

"Plainly she heard the click of the door bolt as it locked the door. McTaggart advanced a step.

"Only a single step McTaggart advanced. On the floor there was a small, white, oval object. He had not moved. He had not made a sound but he was waiting—waiting for the click of the door bolt as it locked the door. McTaggart advanced a step.

KEEPS YOU ROBUST THE VITAMIN-TONIC Scott's Emulsion OF PURE COD-LIVER OIL

Move Ancient House

The remaining portions of Warwick keep have been sold to an American, London report says. The buildings will be taken down alone by stone and carried to the United States.

NEW STRENGTH FOR WEAK STOMACHS

Indigestion Disappears When the Blood Is Enriched

The urgent need of all who suffer from indigestion is a tonic to enrich the blood. Pain and distress after eating is the way the stomach shows that it is too weak to perform the work of digesting the food taken.

In this condition some people foolishly resort to unproven remedies, and only further aggravate the trouble.

New strength is given weak stomachs by Dr. Williams' Pink Pills because these pills enrich and purify the blood. The stomach is the source of giving strength and tone to the body, and it accounts for the speedy relief in stomach disorders that follow the use of Dr. Williams' Pink Pills.

The stomach is the source of giving strength and tone to the body, and it accounts for the speedy relief in stomach disorders that follow the use of Dr. Williams' Pink Pills.

An Amazing Experiment

New York Doctor Kept Fowl's Heart Alive Since 1913

A bit of tissue from a chicken's heart kept alive since 1913 as part of an experiment begun at that time by Dr. Alexis Carrel, would have grown large enough to blanket Manhattan had it not been cut away twenty-four hours, according to Professor Arthur G. Brown.

Professor Brown said a motion picture record of what actually occurred as the tissue grows has been made by the Rockefeller Institute, where the experiment was conducted.

"It was one of the most amazing things I ever saw," Professor Brown said. "The film of the growth of the tissue was taken during twenty hours and must have involved a vast amount of work."

What takes place in the twenty-four hours is reduced in it to a comparatively few minutes.

"You see on the screen a growth and a development making short of cosmic. Combustions, spirals, pulsations—all the marvels of biology seem to condense themselves into those few minutes."

"Dr. Carrel introduced immortality in a physical sense. It is there before your eyes, and so long as this tissue is nurtured and irrigated it will live. It cannot die. Its growth is such that it should last for twenty-four hours, and if it had not been pared down each day since the experiment began it would now be a colossal monster overreaching all New York."

Professor Brown formerly was professor of chemistry at Leeds University, and for many years director of research for the British Yields Corporation.

The Oil for the Athlete—in rubbing down, the athlete will find Dr. Thomas' Pink Pills an excellent article. It renders the muscles and shins pliable, takes the soreness out of them and strengthens them for strains that may be put upon them. It stands pre-eminent for this reason, that for years, have been using it can testify to its value as a lubricant.

To Popularize Bible in France

To make the Bible a "best seller" in France as it is in England and other countries, Mr. Francois Bernouard, a publisher, is going to issue an edition in thirty volumes, with Hebrew and Greek texts opposite the French, with woodcuts scattered liberally throughout. Mr. Bernouard said is a pet who has found its way into many French households.

When Holloway's Cure Remover is applied to a corn it kills the roots and the corn comes out without injury to the flesh.

Canadian factory enjoys a well-merited reputation as a raw material for the ceramic industries, being of high grade and of uniform potash content, analysis of samples from a number of quarries showing a potash content of about 12 per cent.

Minard's Liniment for chilblains

Soap was made by the Gauls over 2,000 years ago. They made it of goat's fat and ashes of beech trees.

Cohal is used as an alloy in making cutting tools. It is principally furnished by Ontario.

Put up only by The T. Millers Co., Limited, Toronto, Ont.

Women Take Up Pharmacy

Prescription filling by women is on the increase in Manila. In the latest report of 119 pharmacists, who took the oath before the board of pharmaceutical examiners, 20 per cent. were women. Virtually 50 per cent. of the students of pharmacy in the leading colleges of Manila are women.

Minard's Liniment for bruises

A Convincing Talker: A man who can make you believe that he was run into even when his radiator and the other fellow's running board are smashed.

Miller's Worm Powders will not only expel worms from the system but will induce healthy conditions of the system under which worms can no longer thrive. Worms keep a child in a continual state of restlessness and pain, and there can be no comfort for the little one until the cause of suffering be removed. Miller's can be equally done by the use of these powders, which are very effective.

Skyscraper For Moscow Paper

Moscow will soon have a regular American skyscraper, 12 stories, or 202 feet high, to house the editorial and typographical departments of Izvestia, the official daily newspaper of the Soviet Government.

Wash Mothers' Work When Extremities always have it at hand, because it proves it.

The original form of a copyright is 28 years and it may be renewed for another 28 years.

Stop that cold with Minard's Liniment

Printer's Sick Stomach and Headaches Almost Cost Job

Mr. K. M. Collins of Woodhaven, N. Y., says, "Instead of plodding through my work wearily on account of sick headaches and sour stomach, I now enjoy good health and ambition, can do more and better work and life is worth living. I have never before given my name to advertise a medicine, but I will after this."

Recommended and for sale by all drug stores.

A certain amount of ignorance is necessary to the enjoyment of our existence.

Boilts, with an area of 560,000 square miles, had a population only about as large as Chicago.

About Town and Country

John F. Miller eye specialist of 404 Underwood Block, Calgary, will be at the hotel in Oyen on Saturday Dec. 12th. Tell your neighbors he is better equipped than ever.

Mrs. W. D. Guthrie, who left on Sunday morning for Calgary, is spending a few days in the city.

Mrs. O. F. Kirkpatrick and little Betty left this morning for Los Angeles, Cal., where they will spend the winter months.

P. H. Peterson was a week-end visitor in town.

The annual general meeting of the Oyen Agricultural Society will be held on Thursday, December 10, at 2 p.m. in the Masonic Hall. All members are requested to be there.

—W. V. Miller, Secretary.

Private Greeting Cards The Oyen News

Under the auspices of the Women's Guild of All Saints' Church, a sale of home cooking and produce, and a number of pieces of hand work, will be held in the Masonic Building on Saturday next. Afternoon tea will be served. Sale commences at 2:30 p.m. Donations of home cooking will be gratefully received.

A shower for Miss Ruth Duffield, was held at the home of Mrs. R. A. McLaren on Monday evening.

Elmer McArthur left yesterday for Calgary on a short business visit.

John D. Church left this morning for Spokane, Wash.

The special men's service at the United Church last Sunday was well attended.

Mr. and Mrs. C. L. Wilson of Sibbald are spending a few days in town.

In Lighter Vein

Hoot Mo!

"You're lookin' bad, Wullie."
"Aye, I've been in hospital an' the doctors have taken awa' ma appendix."

"These doctors! I tak' anything. It's a peety ye didna have it in yer wife's name."

Obituaries

Here lies the remains of Percy Sapp.
He drove his car with his girl on his lap.

Lies slumbering here, one William Blake
He heard the bell, but had no brake.

Here's Mary Ann—but not alive
She made her coupe do forty-five.

While it is true that a lot of money is spent each year for fun, there are some folks who never seem to have any.

IT PAYS TO ADVERTISE

"The codfish lays a million eggs. While the helpful hen lays one. But the codfish does not caulk to tell what she has done; And so we scorn the codfish coy. But the helpful hen we prize. Which indicates to thoughtful minds, It pays to advertise."

EXCEL ITEMS

Mr. George Lemieux left last Wednesday for the far north, having previously disposed of his alarm clock business. On the eve of his departure, he was presented with a beautiful "juice harp" by the Excel boys and an address was given by Mr. Frank Thayer. The recipient replied with a few very appropriate tunes.

Mr. and Mrs. Frank Thayer and family left last Thursday for Spokane and points on the west coast, where they intend to spend the winter months.

The Excel School was filled to capacity at a dance held there last Friday. If the present increase in young (and not so young) flappers and sheiks continues, a much larger hall will be required.

The Excel W. I. held their regular meeting at the home of Mrs. H. A. Hove last Thursday.

Quite a number of Excelites attended the showing of "The Limited Mail" at Oyen Theatre last Saturday.

LANFINE LOCALS

The lantern lecture on Thursday evening was thoroughly enjoyed by a large audience.

The new "Y" is rapidly nearing completion. Cars are already being run on it.

Mr. and Mrs. L. F. Hammond spent Sunday at Watts, Alta.

The annual meeting of the Lanfine W. I. was held last Friday. There was a large attendance and an enjoyable evening spent by the members.

The annual Lanfine Christmas Tree will be held in the Community Hall, on Tuesday, December 22. Come and hear the children and meet Santa Claus.
